

CAMERON KNICKERBOCKER

(570) 445-8000 — camks12@gmail.com — github.com/cameron1752 — linkedin.com/in/camknickerbocker

Summary

Senior Software Engineer and acting development lead with 7+ years in enterprise technology, building Java/Spring Boot microservices and high-throughput batch systems on AWS. Led a team of 5 to deliver credit platform APIs serving 50k users daily; experienced in CI/CD, cloud migration, and mentoring engineers.

Professional Experience

JP Morgan Chase & Co – Business Credit Journey

November 2024 – Present

Software Engineer III (Acting Software Development Lead)

Wilmington, DE

- Led a team of 5 engineers to deliver 4 REST APIs and a credit score monitoring batch process that obtain and store user credit data, serving 50k users daily.
- Partnered with senior leadership to design the microservice and batch architecture for the Business Credit Journey platform, meeting enterprise data governance requirements.
- Architected multi-threaded batch platform for credit score monitoring, processing 100k records a day in an hour of runtime; designed custom DB locking mechanism for concurrent instances processing in parallel, eliminating duplicate processing across instances.
- Mentored 5 engineers through code reviews and design sessions; as release captain, coordinated 12 production deployments across 4 teams with zero production downtime.
- Enhanced Jenkins/Spinnaker CI/CD pipelines supporting blue-green deployments, reducing production errors by 25%; owned observability and site reliability for 8 microservices, building Splunk dashboards and alerts for application and infrastructure issues.
- Led AWS Graviton migration for 8 services, reducing infrastructure costs by 20%; drove on-premises Oracle to AWS RDS Aurora PostgreSQL data migration with zero downtime and zero lost data.

United Parcel Service

June 2022 – October 2024

Software Development Engineer II

Remote

- Developed and supported Spring Boot RESTful APIs serving 100,000+ daily active users and 500,000+ daily requests, with Angular-based front-end integration.
- Designed and optimized SQL queries on Oracle, stored procedures, and relational database structures supporting enterprise application performance and scalability.
- Implemented Auth0 authentication across the developer portal platform, securing access for 100,000+ daily active users and resolved security vulnerabilities via SonarQube
- Reduced support tickets by 75% by creating automated Postman API testing suite.
- Owned full software delivery across the SDLC including design, development, testing, deployment, and production support in Agile/Scrum environments.

United Parcel Service

September 2019 – June 2022

Business Process Engineer / Software Development Engineer I

Remote

- Automated UPS Freight processes as a Business Process Engineer, eliminating 1,000+ hours of manual work and earning the 2021 UPS Game Changer Award; transitioned into software development on API Developer Portal.
- Collaborated across teams to troubleshoot application issues and improve reliability of business-critical systems serving large-scale operational workflows.

Education

Penn State University

September 2017 – May 2021

Bachelor of Science in Information Science and Technology

Scranton, Pennsylvania

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, HTML/CSS

Architecture & Observability: Splunk, Dynatrace, Microservices, Multithreading, Batch Processing

Cloud & Devops: AWS (EC2, RDS Aurora, Graviton), Jenkins, Spinnaker, OpenShift, Azure Pipelines, Blue-Green Deployments

Databases: Oracle, PostgreSQL (Aurora), Cassandra, Relational Databases, SQL Development, Stored Procedures

Developer Tools: Git, IntelliJ, Postman, VS Code, SonarQube

Practices: Full Stack Development, System Design, SDLC, Agile/Scrum (SAFe), CI/CD, Cloud-Native Architecture, Technical Mentorship, Release Management

Certifications & Training

Professional Development: Completed UPS Management Training – (UPS, 2022); Advanced Web Application Security Testing Certification – (UPS, 2023)
